Update on Panzyga, Cutaquig and Octagam Availability

Customer Letter # 2023-28

2023-10-30

Dear Colleagues:

Further to [CL 2022-32](#), Panzyga, Octagam, and Cutaquig were removed from the plasma protein and related products (PPRP) formulary in April 2023. Panzyga is no longer available for general ordering, and Canadian Blood Services is grateful to the hospital customers who are assisting with utilizing the remaining inventory.

Cutaquig and Octagam will continue to be available for general ordering until current inventory is depleted.

To prevent wastage, **we are asking for your assistance in keeping patients on Cutaquig and Octagam until at least January 2024.**

Ig brand	Comment
Cutaquig	Please begin transitions no earlier than January 2024. Transitions can then occur over a period of approximately six months.
Octagam	Please begin transitions no earlier than January 2024. Transitions can then occur over a period of approximately three months.

Please continue to monitor current and target share splits through the regular reports from your local hospital liaison specialist.

Please share a copy of this customer letter with healthcare professionals at your hospital who might be interested in this information.

This customer letter can also be viewed at www.blood.ca in the “Hospital Services” section. If you have questions about this letter, or if you require it in an accessible format, please contact your local hospital liaison specialist.

Sincerely,

Sylvain Grenier
Director, Plasma Protein and Related Products Formulary Program
