Attachment 1: New Shipping Containers Visual Guide

The new Shipping Containers consists of a vacuum insulated panel surrounded by an expanded polypropylene foam. The black expanded polypropylene foam is the distinguishing feature of the new shipping container as it contrasts with the existing shipping containers which have a white interior.

Pictured above: A new black Expanded Polypropylene Shipping Container on the left and an existing white shipping container on the right with covers in place.

Pictured above: A new Black Expanded Polypropylene Shipping container with 1 phase change material plate inside on the left, and an existing white shipping container on the right with 1 phase change material plate inside.
