1. ND = no data
2. P/T = Province / Territory
3. Disposition data presented is contingent on multiple factors: whether a complete data set has been received for 2017-2018, availability of data by blood group versus totals only, number of special phenotyped units received as O Neg (not requested) and participation in local blood re-distribution programs.
4. Manitoba hospital data is received directly from Traceline per implementation date (# O Neg units transfused to non-O Neg patients data configuration is pending)
